Hello,

Please, read article http://wiki.openvz.org/Kernel_build, it is about how to build kernel. Also there is a description how to add your patches.

Thanks to this patch simfs returns as free blocks, available blocks and amount of blocks values _directly_ from quota. It means that if you set quota limit to 50gb, df will always show 50gb.

To unroll this patch you should just boot in unpatched kernel.

HTH,
Vasily
