Hello,

I have problem with sshd on RedHat Enterprise 4 update 2 VPS. Every time when I try run /usr/sbin/sshd it just prints

"Jan 26 14:34:14 rhel4 sshd[32341]: fatal: daemon() failed: No such device"

into a log file and dies. If started in debug mode (/usr/sbin/sshd -d) in foreground it runs fine and I can connect from outside.

I would very appreciate any help.

Shi
