Hi! Anyone have a trouble with (open)virtuozzo and nfs?
When I compile kernel vzkernel 2.6.8-022stab032.1 with support NFS server v3 and v4 nfs daemon don't start.
Today I'll try to post hear errors about it, but maybe it have to doing in other place? (like bugzilla & )
And what additional information could be usefull from me exept kernel .config and tail -f /var/log/messages?
