Hello,
Wondering if anyone can post what is needed in Shorewall to allow people from the outside to connect to virtual machines using OpenVZ?

Currently, I can connect to the host fine, however I can't reach any of my virtual machines. I assume this has something to do with configuring the venet0 interface in shorewall to allow packet forwarding. If someone could post their configuration of shorewall under OpenVZ(HOST)I would appreciate it. Below is what I have in my interfaces, policy, rules files for shorewall. Thanks.

/etc/shorewall/interfaces
#ZONE INTERFACE BROADCAST OPTIONS
net eth0 204.83.151.73

/etc/shorewall/policy
#SOURCE DEST POLICY LOG LIMIT:BURST
LEVEL
fw net ACCEPT
net all DROP
all all REJECT

/etc/shorewall/rules
#SECTION RELATED
SECTION NEW
ACCEPT net fw tcp 22 -
ACCEPT net fw icmp - -
