Subject: Vzdump Files missing

Hi everyone,

I wanted to restore a container running several websites, because I screwed something up.
So I restored using vzrestore to a different container-id, but the folder I was looking for was missing.

How can that happen? Is there a chance to do an integrity-check of the backup?

Here is the command I'm using for backups
vzdump --snapshot --dumpdir /backup/vzdumps/ --compress --maxfiles 1 --tmpdir /vz/vztmp/ --bwlimit 50000 1016

ii linux-image-openvz-amd64 042stab106.6
ii vzctl 4.8-2
ii vzdump 1.2.6-3
ii vzquota 3.1-1
ii vzstats 0.5.3-1

Thank you very much for your help.

vzdump is a tool made by proxmox, so I suspect that best option is would be ask them.

An update of the vz-packages in debian solved the problem.
Thanks!
