Hello,
I am quite new to openvz but I realy like it.

I have a server with debian and a openvz kernel (Linux version 2.6.18.2). Its works quote fine. But when uning apt-get or aptiude inside one of the virtual machines its getting strange.

I have a connection to the internet:
root@test02:~# ping heise.de
PING heise.de (193.99.144.80) 56(84) bytes of data.
64 bytes from redirector.heise.de (193.99.144.80): icmp_seq=1 ttl=243 time=12.1 ms
64 bytes from redirector.heise.de (193.99.144.80): icmp_seq=2 ttl=243 time=10.9 ms

looks good.

Then an apt-get install mysql-server
root@test02:~# apt-get install mysql-server

E: Unable to fetch some archives, maybe run apt-get update or try with --fix-missing?

I have tested several mirrors for ubuntu(this box runs ubuntu). Nothing changes. I tried a virtual Debian box. The same. If I d/l via wget its works quote fine.

What happens here? dmesg says nothing(neither in the host nor in the virtual box). The funny thing is that very small packages are working. Its stops afer some mb of downloading
On the Host for the virtual boxes apt-get works fine.

What could it be?
