Hi,

Does this vulnerability affects OpenVZ 6/7?
Is there a plan to release updated kernel?

F.Y.I. -
I am using KernelCare.
It just released the patch for OpenVZ 6.
not sure OpenVZ/Virtuozzo when will release the update....

I am interested in this as well. I hope it is soon.

Anyone know of anyone still updating and patching centos 5 kernels? I regrettably am responsible for a few boxes that are still using it.

I'm curious why no one seems to concerned about this? Am I missing something in regard to guarding against this? Have people moved on from openvz? Seeking your input...
