Hi, I am creating a free openvz web based monitoring application, I have called it OVZMon for "OpenVZ Monitor". I am requesting feedback on my first version, so that you can tell me what features you would like to see. I feel that this application will be of great value to people running many VEs and wishing to have statistical information about each VEs resource usage.

This is not a control panel, its a reporting panel.

URL: http://demo.ovzmon.com/
user: demo
pass: demo

Features:
Per VE Resources
Bandwidth
CPU Usage in MHz
Ram Usage
Network Packet Rate
Running/Blocked Processes

Toptalkers Reporting
Allows you to rank VEs according to all usages above. Answer such questions as:
"Which VE is using the most CPU power over the last week?"
"Which VE was receiving the most packets inbound in the last hour?"
"Which VE is allocating the most ram in the last month?"

Security
OVZMon is its own VE and has only one bash script which runs in the HN context.

Ease of Installation
1) Download the OVZMon VE, start it, create one cronjob in HN.
2) Log into OVZMon web application and start viewing stats

Cheers
Rick
