Hi,

I've got a problem with vzdump - it doesn't work. Please look at this.

root@vps:~# vzdump --compress --dumpdir /vz/dump --snapshot 1
ERROR: strange VPS ID '1'

usage: /usr/bin/vzdump OPTIONS [--all | VPSID]

```
--exclude VPSID        exclude VPSID (assumes --all)
--exclude-path REGEX   exclude certain files/directories
--compress             compress dump file (gzip)
--dumpdir DIR          store resulting files in DIR
--xdelta               create differential backup using xdelta
--mailto EMAIL         send notification mail to EMAIL.
--stop                 stop/start VPS if running
--suspend              suspend/resume VPS when running
--snapshot             use LVM snapshot when running
--restore FILENAME     restore FILENAME
```

VEID 1 was created correctly several days ago and now is online.

Server is based on Ubuntu Gutsy Gibbon GNU/Linux: Linux v02 2.6.18-fza-028stab051.1-amd64 #1 SMP Fri Dec 7 15:14:08 UTC 2007 x86_64 GNU/Linux.

Does anyone know how to backup VPS correctly without this error?

Thanks.

Yours sincerely, Martin Carbol

Hi Martin,

the first VEID should be 101, not be 1 (explained at OpenVZ User Guide, page 22) so change your VEID to 101 and start vzdump.

Hi Thorsten,

thanks for your advice, it is working now.
