I tried to run update and found that I cannot update to openvz 042stab131.1
My OS is Centos 6.9

```
# yum update
Loaded plugins: fastestmirror, security
Setting up Update Process
Loading mirror speeds from cached hostfile
 * base: repo.virtualhosting.hk
 * extras: repo.virtualhosting.hk
 * updates: repo.virtualhosting.hk

          Available: kernel-firmware-2.6.32-696.20.1.el6.noarch (updates)
```

kernel-firmware = 2.6.32-696.20.1.el6
Available: kernel-firmware-2.6.32-696.23.1.el6.noarch (updates)
kernel-firmware = 2.6.32-696.23.1.el6
Available: kernel-firmware-2.6.32-696.28.1.el6.noarch (updates)
kernel-firmware = 2.6.32-696.28.1.el6
You could try using --skip-broken to work around the problem
You could try running: rpm -Va --nofiles --nodigest

I already tried:

yum update --skip-broken

I also tried to install the latest centos kernel and my latest Centos is:
title CentOS (2.6.32-696.30.1.el6.x86_64)

Your help will be very appreciated.

Same issue here, also running CentOS 6.9.

Any workarounds/solutions?

Try to upgrade vzkernel-firmware first
http://download.openvz.org/kernel/branches/rhel6-2.6.32/042stab131.1/vzkernel-firmware-2.6.32-042stab131.1.noarch.rpm
it is based on RHEL6 kernel and provides kernel-firmware = 2.6.32-754.el6
