hello,

I want to install openvz on the debian server. I hvae the following doubts. please help me.

1) if i install debian on the main server, can I create VPS having distros of redhat, suse etc. can u give me any useful link for that?
2) do openvz allow overselling? if I have 2GB physical RAM, can I create 3VPS having 1GB RAM each?
3) Can you give me a url that contains step-by-step instruction to install the Openvz and configure the VPS?

I am a newbiee in VPS.
