Subject: Too many errors on container start

It was lot of messages about usleep in OVZ8.

Now it is even more errors in startup scripts in OVZ9

I can only think about using > /dev/null 2>&1 as a remedy.

```
[root@node01 ~]# vzctl start 1301
Starting Container ...
Mount image: /vz/private/1301/root.hdd
Container is mounted
Setting permissions for image=/vz/private/1301/root.hdd

Container start in progress...

Also after system bootup not all container are in the running state. About half of them are stopped after startup. Each time random.

Dear mangust,
Could you please clarify used template?
according to "Os release: 4.18.0" it should be centos-8-stream ?
Anyway, please report about all noticed troubles at bugs.openvz.org.

Thank you,
Vasily Averin

I can look at the code too, is there any repo i can fork and propose fixes?

All this mistake are likely container initialization scripts were not adopted for newer CO releases.

You can find openvz sources in our git:
https://src.openvz.org/projects/OVZ

Thank you,
Vasily Averin

Hi all,

Is there any update regarding to such lots of errors? And also the problem "after system bootup not all container are in the running state. About half of them are stopped after startup. Each time random."? I just tested OpenVZ 9.0.0-257 still have such problems.
