Subject: SIOCADDRT: No such device -- when adding IP's

Hello -

Anyone seen this problem? I cannot add IP's to VPSs. I've checked out other posts to no avail. This is a fresh install of Fedora C4 with the 2.6.8-022stab038.1 OpenVZ kernel and /etc/sysctl.conf set according to directions.

This machine has two ethernet interfaces but only eth0 is active (and of course venet0). I am SSH'd to this machine so obviously networking is fine. I cannot figure out what device it's trying to bind to.

Here's venet0:

```
venet0    Link encap:UNSPEC  HWaddr FC-BF-F4-6F-54-00-00-10-00-00-00-00-00-00-00-00
          UP BROADCAST POINTOPOINT RUNNING NOARP  MTU:1500  Metric:1
          RX packets:0 errors:0 dropped:0 overruns:0 frame:0
          TX packets:0 errors:0 dropped:3 overruns:0 carrier:0
          collisions:0 txqueuelen:0
          RX bytes:0 (0.0 b)  TX bytes:0 (0.0 b)
```

Here's the attempt to add:

```
[root@nerd sysconfig]# vzctl set 172 --ipadd 10.1.1.72 --save
Adding IP address(es): 10.1.1.72

SIOCADDRT: No such device
```

Any guru help out there is appreciated!

Thanks!

-Erik

Me again. Problem got weirder: I finally rebooted the Host Node and it worked. One time. Then I restarted the VPS and now the same error. "No such device"

As I figured, this Host Node has issues. A second clean resinstall and a yum update cleared this up.
