Hello team, i want to set the maximum bandwidth to be used by a VPS container. i.e I want to assign 500GB of bandwidth to a vps container, after the utilization of alloted bandwidth, the account should be temporarily suspended / stop incoming outgoing request.
Can I set this? Just help me assign the bandwidth amount to a VPS.

Hello,

Try one of the control panels for OpenVZ, search for OpenVZ wiki or google for "OpenVZ Control panel"

For example, SolusVM has bandwidth accounting.
