Subject: *SOLVED* Unable to communicate between virtual servers

Hello,

I currently have a couple Virtual Servers set up, one for Apache, one for PostgreSQL, and one for Tomcat. I want the Tomcat one to access the PostgreSQL virtual server and the apache one to access the tomcat one. I am able to ping each virtual server from within another virtual server, but am unable to connect using telnet to the necessary port (e.g. from the Tomcat VS, I cannot telnet to the postgresql one or connect using psql using port 5432). Also, on the Hardware node I can also not telnet or use psql into the postgresql virtual server, so I know it's something related to IPTables, but I'm unsure how to fix it.

I'm a bit confused how to set up iptables to do what I need it to do. Can anyone help?

Thanks!

Problem solved. It was an IPTables things.
