Hello!

I thought i had understand the output of vzmemcheck. But at the moment i believe - i don't...

Output:

vzmemcheck -A -v
Output values in Mbytes

veid	LowMem util	LowMem commit	RAM util	MemSwap util	MemSwap commit	MemSwap util	Alloc commit	Alloc limit
181	5.44	16.13	271.68	271.68	266.13	393.26	266.13	2016.13

So this VPS has a Commit of 266.13 - how can the VPS use 271.68 ?

Stefan
