Hi!! I like openvz, it's incredible the performance and it's fast.

I try install the openvz in fedora 17, but I get this error:

[root@maykel yum.repos.d]# yum install vzkernel.x86_64
Complementos cargados:langpacks, presto, refresh-packagekit
Resolving dependencies:
--> Eject test transaction:
---> Paquete vzkernel.x86_64 0:2.6.32-042stab055.12 may installed
--> Process dependencies: /sbin/mkinitrd para el paquete:
vzkernel-2.6.32-042stab055.12.x86_64
--> Process dependencies: /sbin/mkinitrd para el paquete:
vzkernel-2.6.32-042stab055.12.x86_64
--> Process dependencies: systemd-44-12.fc17.x86_64 choca con kernel <
2.6.35.2-9.fc14
--> Process dependencies finished
Error: systemd conflicts with vzkernel-2.6.32-042stab055.12.x86_64
Error: Package: vzkernel-2.6.32-042stab055.12.x86_64 (openvz-kernel-rhel6)
Need: /sbin/mkinitrd
Maybe try the command --skip-broken for solved the problem
Maybe try eject the commandr: rpm- Va --nofiles --nodigest

Sorry for my english, but the distribution is spanish.

I try this:

yum --skip-broken install vzkernel.x86_64

And...I get the same error...

Can I install the openvz in fedora 17?

Thanks in advanced.

I'm a Fedora fan myself... on the desktop... but not on servers... because Fedora simply is not supported long enough - 13 months. The properties of Fedora make it a bad choice for servers unless of course you have a requirement for a bleeding edge setup (like for development or something).

I don't think that Fedora 17 can currently be run as a container either but that is likely to change in the not too distant future.

That isn't a solution but it solves the problem without requiring a solution. :)

TYL,

So..? Fedora 15 and Fedora 17 are two completely different beasts.

In 3 months, probably openvz install in fedora. If install in fedora 15,
in the futuro install on fedora 17.

Thanks.

Fedora 15 support ends in three weeks, on 26th. I wouldn't use it for
anything meaningful any more.

What are your assumptions about three months based on? Don't get me
wrong, I'd like you to be right, because openvz support for Fedora 17
hosts would simplify some of the devel work we do on our workstations.
I just don't see it coming.

Regards
