vzctl restart 109
Warning: Unknown iptable module: ipt_MASQUERADE, skipped
Warning: Unknown iptable module: ipt_MASQUERADE, skipped

No idea why this has just suddenly started happening, using kernel:
2.6.18-308.el5.028stab099.3

Any ideas

New kernel probably doesn't have the module compiled in. Might have to modprobe it.

If you need it inside the VM, try putting the module in /etc/vz/vz.conf:
IPTABLES="ipt_REJECT ipt_REDIRECT ipt_tos ipt_limit ipt_multiport iptable_filter iptable_mangle ipt_TCPMSS ipt_tcpmss ipt_ttl ipt_length iptable_nat"

The module name should be ipt_MASQUERADE.
