Well, the solution seems to be obvious.

Of course the tun device has to be activated on the HN before giving access to the VE.

So first on HN:

Quote:

```
# mkdir -p /dev/net  
# mknod /dev/net/tun c 10 200  
# chmod 600 /dev/net/tun
```

and after that on VE

Quote:

```
# vzctl set 1001 --devices c:10:200:rw --save  
# vzctl exec 1001 mkdir -p /dev/net  
# vzctl exec 1001 mknod /dev/net/tun c 10 200  
# vzctl exec 1001 chmod 600 /dev/net/tun
```

Now everything works!

Burkhard
