Subject: Re: running dnsmasq on VPS?
Posted by pixelplumber on Sun, 18 Feb 2007 22:21:45 GMT

I installed a 2.37-1.el4.rf.x86_64 rpm from rpmfind. perhaps I should try an earlier version, I'm using a stable 2.6.9 kernel. At any rate I've moved on to experimenting with maradns (just setting up a simple caching server). Thanks for the replies all, I'll have another go when 2.6.19 becomes the stable.
