saule ~ # vzlist -a
```
      VEID      NPROC STATUS  IP_ADDR         HOSTNAME
         1         14 running 123.456.78.90   CentOS
         2         14 running 123.456.78.91   SLC
         3          4 running 123.456.78.92   Debian
         4          3 running 123.456.78.93   OpenSUSE
         5          4 running 123.456.78.94   Slackware
         6          - mounted 123.456.78.95   Ubuntu
         7          3 running 123.456.78.96   CentOS-5
         8          3 running 123.456.78.97   Arch
```
saule ~ # vzctl start 6
Starting VE ...
VE is unmounted
VE is mounted
Adding IP address(es): 123.456.78.95
Setting CPU units: 1000
Set hostname: Ubuntu
File resolv.conf was modified
VE start in progress...
saule ~ # vzctl enter 6
VE is not running
saule ~ # vzctl enter 8
enter into VE 8 failed
Unable to open pty: No such file or directory
host system - gentoo (uses dynamic udev, which dynamically creates symbolic links to a device)

Hi,

can you please poste:

* version of vzctl
* version of VE OS Template of ubuntu and archlinux, precreated or selfbuilded

Hello,

vzctl version 3.0.16

arch-0.8-i386-minimal
ubuntu-7.10-i386-minimal

all from: http://openvz.org/download/template/cache/

Hi,

ubuntu-7.10:
needed a vzctl version of 3.0.19 (-> http://wiki.openvz.org/Ubuntu_Gutsy_template_creation#vzctl
)

archlinux-0.8:
some dev nodes are missing, to solve this:

```
# cp -a /dev/console /dev/tty /dev/full /dev/initctl \
  /dev/null /dev/ptmx /dev/pts /dev/random /dev/urandom /dev/zero \
  /<VE_ROOTDIR>/dev
```

or downloaded the updated archlinux-0.8 template.
