Hi folks,

Debian 600 64-bit (sqeeze, testing)

On running;

$ apt-cache search openvz
collectd-core - statistics collection and monitoring daemon (core system)
linux-headers-2.6.32-5-common-openvz - Common header files for Linux 2.6.32-5-openvz
linux-headers-2.6.32-5-openvz-amd64 - Header files for Linux 2.6.32-5-openvz-amd64
linux-image-2.6.32-5-openvz-amd64-dbg - Debugging infos for Linux 2.6.32-5-openvz-amd64
linux-image-2.6.32-5-openvz-amd64 - Linux 2.6.32 for 64-bit PCs, OpenVZ support
linux-headers-2.6-openvz-amd64 - Header files for Linux 2.6-openvz-amd64 (meta-package)
linux-image-2.6-openvz-amd64 - Linux 2.6 for 64-bit PCs (meta-package), OpenVZ support
linux-image-openvz-amd64 - Linux for 64-bit PCs (meta-package), OpenVZ support
libvirt-bin - the programs for the libvirt library
libvirt-dev - development files for the libvirt library
libvirt-doc - documentation for the libvirt library
libvirt0-dbg - library for interfacing with different virtualization systems
libvirt0 - library for interfacing with different virtualization systems
python-libvirt - libvirt Python bindings
vzctl - server virtualization solution - control tools
vzdump - OpenVZ backup scripts
vzquota - server virtualization solution - quota tools

Which package/packages shall I install? TIA

B.R.

linux-image-2.6-openvz-amd64 should be enough. if you need vzdump or vzquota install them as well.

Hi,

Thanks for your advice.
