Hello,

i am looking for a script where it is possible to reboot your VE from a website.

I.e. Customer logs into a website. He checks a box "reboot ve" and the ve restarts within the next few seconds.

Is there anything like that existing ?

Regards
Daniel

First you just need a Database to store username, password, VE and Host IP

The reboot can be done in php using 'Secure Shell2 Functions'

```
<?
$connection = ssh2_connect($host_ip, 22);
ssh2_auth_password($connection, $host_username, $host_password);

$stream = ssh2_exec($connection, 'vzctl restart $veid');
?>
```
