Hello,

At first, to avoid problems with DNS, we will ping by IP addresses, but not by server names. For example, yahoo.com have IP address 66.94.234.13, and we will use at first step.

I can see, that IP address X.Y.152.160 is ascribed to eth1:0 and to VEs venet0:0 interface. It is not right, you should delete it from eth1:0

After that, if it still not work, please, do the following and post the output here:

in VE:

```
# ping 66.94.234.13
# ip r get 66.94.234.13
# iptables -L -nv
# iptables -t nat -L -nv
```

on HN:

```
# ping X.Y.151.90
# ping 66.94.234.13
# ip r get 66.94.234.13
# ip r get X.Y.152.160
# iptables -L -nv
# iptables -t nat -L -nv
```

Thanks.
