And:

inside HW: eth1:0 has X.Y.152.160

and

inside VE: venet0:1 has X.Y.152.160 - the same IP address???

See also articles about VE networking when there are several hw interfaces on HW node:

http://wiki.openvz.org/Multiple_Network_Interfaces

Also please check, that IP packets were really sent to internet:

```
# tcpdump -nni eth1  
(not venet0)
```
