Hey there,

I just starting using OpenVZ, and I love it, however trying to find a working ssh proxy/gateway is driving me crazy. I have tried sshproxy-project and it just doesn't work, I get authorization errors left and right.
Does anybody know of a good ssh proxy application that works on OpenVZ?
Thanks

After spending many hours toying and playing with it, I cannot get it to work with a normal Putty session. Does anybody have any other suggestions or can anybody provide some existing configuration they are using to forward ssh sessions to their containers?
