Hi there,

is anybody running a working pure-ftpd under an open-vz VM ?
(debian and apt-get pure-ftpd)

I tried it out and get this error?

421 Unable to switch capabilities : Operation not permitted

Google told my this :
Try to compile with --without-capabilities.

You need CONFIG_SECURITY_CAPABILITIES=y in your kernel config.
Alternatively if it is compiled as module, it as to be loaded.

Source : http://bugs.debian.org/cgi-bin/bugreport.cgi?bug=272527

Why is this disabled in OPEN-VZ ?

Hello,

OpenVZ uses standard linux common capabilities security model. It is compiled in if CONFIG_SECURITY option is off. If CONFIG_SECURITY option is on, then user can use various security models. One of them: are selinux model and standard linux common capabilities security model. CONFIG_SECURITY_CAPABILITIES controls wether to build standard linux common capabilities security if CONFIG_SECURITY is on.

As OpenVZ supports only common capabilities security model, then CONFIG_SECURITY is off and CONFIG_SECURITY_CAPABILITIES is off too.

As concerns your problem. Please, read this thread
http://forum.openvz.org/index.php?t=tree&th=791&mid= 4203&&rev=&reveal= I guess, it can help you.

Thanks,
Vasily

hi,

I've tried to recompile it. The daemon starts now but now i've some probs with the mysqlconnection. But this is the wrong place to discuss about

tnx for this hint.
