Installed xwindow and vnc server with kde in the centos 5 vps 32 bit. And when I connect via VNC viewer I see remote desktop in different language.
Can anyone suggest how to fix it.

Thanks

Perhaps it is in English but you are missing some fonts?

I have some GUI OS Templates I've made. I'm not sure how to fix your problem (I'd have to login and poke around to get a clue)... but I can provide you with a known working OS Template if you like. Feel free to email me and I'll give you a URL.

I don't post my GUI OS Templates to the contributed pre-created OS Templates because they are rather large.

I installed the xwindows on main server node. And when I connect via vncviewer its in english.

Can you please pm me the templates you got with GUI modules installed.

Thanks
