Is this supported yet?
I'm trying to mount an nfs4 share in a VE with:

2.6.24 | OpenVZ 007.1

This is what I get when I try to mount:

[root@cos47i686 /]# mount -t nfs4 usa-box1:/demo /mnt/usa-box1/
mount: fs type nfs4 not supported by kernel

Hi.

Quote:Is this supported yet?
Unfortunately NFSv4 is not virtualized and thus not supported inside a Container.
