Dear all

It has been sometime I was busy and inactive. After receiving several emails about webvz that it is not running under latest ruby on rails versions. I have modified it to work with that. At the moment there is no extra features added to it.

You can download the latest webvz from github.com at the following link
http://github.com/shuaibzahda/webvz/tree/master

Please choose download and download the file, extract it and run it as usual

for more information visit the website of webvz at http://webvz.sourceforge.net

I will be glad to receive new features to be added in the coming release

Thanks
Shuaib Zahda
WebVZ Developer
