Subject: /dev/vzctl and udev

Hi,

on a host system using udev (gentoo) the device /dev/vzctl will not exist on reboot and therefore /etc/init.d/vz start fails.

I thought inserting one of the vz-modules will create it, but they don't.

How to overcome this problem?

restart of service 'vz' should create it.
it is created in service, not through udev since openvz works on many distributions, not on udev-based only.

but I filled in the bug, and we will enable it via udev also a bit later.
