Hi,

I have been trying to get a Red Hat 7.2 VE running on a Debian Sarge (with kernel 2.6.18-openvz-amd64) for a few days now. Startup goes well, as well as all the daemons. (mysql/apache/..)

The problem arises when I stop the VE, it takes 2 minutes and thus times out. (it gets stopped because of the 2 minute timeout)

I have tried stopping all the services (mysql/apache/cron/xinetd/..) before stopping the VE, but this does not help.

Any advice on how to troubleshoot this? I don't notice anything weird in the logs so I guess it's a minor issue that keeps the VE from stopping properly.

cheers!
