Subject: need PAE or bigmem kernel in a 32Bit debian 4 container

Hi

I use the kernel 2.6.18-128.1.1.el5.028stab062.3 on my hardware node with a 64Bit Centos. I'm using openvz and run a container with a 32Bit Debian 4. Now I have the problem that java needs 4GB Ram inside my debian 4 32Bit container. Unfortunately with my kernel it's not possible to use that much ram, I would need a PAE or bigmem kernel. Is there any kernel which I could install on my node, that I have inside my container the possibility to use more ram?

Thanks
Michael

Hi

Unfortuantely nobody did answer yet, do you need more information from me?

Thanks
Michael
