Hallo Christian,

Die man-page von vz.conf bringt dich der Sache etwas näher

```
# man 5 vz.conf
```

```
[...]
```

```
MODULES_DISABLED=yes|no
```

```
If the value of this parameter is set to yes,
```

```
no attempt to load OpenVZ kernel modules is made in vz initscript.
```

```
This is helpful on systems which have OpenVZ-specific stuff  
compiled into the kernel (i. e. not as modules).
```

```
[...]
```

```
# echo "MODULES_DISABLED=\"yes\"" >> /etc/vz.conf
```

Hast Du auch das Module "af\_packet" und relevante Module von iptables miteinkompliert ?

Gruß,

Thorsten
