
Subject: *CLOSED* Differences in /proc handling between 2.6.18 and 2.6.9 openvz kernels

Hello,

Kernels used for this comparision:

- 2.6.9-023stab032.1-smp
- 2.6.18-ovz028test005.1-smp

I've noticed a somewhat strage behaviour with /proc handling of the virtual environments. When using kernel 2.6.18 i am able to see and access the VE's /proc-Filesystem in /vz/root/VEID/proc whereas with kernel 2.6.9 this directory is empty.

This makes it rather hard for me to run a complete backup of my hostnode with rdiff-backup since i'd have to specify an individual exclude for each VE.

Is this intended behaviour or should this be considered a bug (-> Bugzilla?)?

Cheers
Torsten
