Hello,

it seems that i found a small bug on the new vzquota package.
The actual version of vzquota identifies itself as version 2.5.0.

$ vzquota -V
Vzquota version 2.5.0

on the RPM system its correctly identified as version 3.0.0-2

$ rpm -qa | grep vzquota
vzquota-3.0.0-2

so far...

Hello again,

The issue is based on line 24 on include/common.h:

/* current utilities version */
#define VZQUOTA_VERSION "2.5.0"

just change VZQUOTA_VERSION to "3.0.0-2" and it should be fixed.

so far...
