Hi,
I've a vps account that is based on Virtuozzo ,
I need to add ppp support to my kernel or upgrade it to 2.6.18,
I wana know that is it possible or not?

Hi.

unfortunately support ppp has not been virtualized yet, i.e. it cann't be used inside a VE.
http://bugzilla.openvz.org/show_bug.cgi?id=268

This is still true for both VZ and OVZ.

Well, you can setup an OpenVPN, for example, which uses TUN/TAP, not the ppp.
http://wiki.openvz.org/VPN_via_the_TUN/TAP_device

tnx but the output of "modprobe tun" is:
FATAL: Module tun not found.

how to load tun module? or even is it possible with my vps's kernel?

i suspect you're tring to load the module inside the VE.
The module should be loaded on the Hardware Node.

what if I haven't access to Hardware Node.
I'm just a VE user

Well, looks like you have to ask the support people for the help,
you cann't set up it without the access to the HN, sorry.
