Hi, I have developed a fully functional web based control panel to administrate the backend of OpenVZ. The program will be listed under GNU   and should be starting the 1st downloads soon. I am waiting for OpenVZ blessing 1st before I officially offer the download link. In the mean time, here are some screen shots.

<< EDIT >>

Ok, happy downloading!

Requirements:
* Apache 1.3.34
* PHP 4.4.2
* gcc

How to install Apache + PHP follow this link:
http://www.lamphowto.com/lamp.htm

Download OpenVZ Control Panel follow this link:
http://scripts.blurstorm.com/index.php?id=downloads

<< /EDIT >>

Once we start downloading, I welcome feedback and bug reports as well as other programmers (php mainly) who want to make this better. More will be talked about this once OpenVZ blesses the program.

Robert
