What data are you looking at and drawing this conclusion? Be specific, for example:

When I look at data "XXXXXXXXX", I see value "YYY" which should be less then "ZZZZ" according to my current understanding of the VZ cpu scheduler.

Also, send us "vzcpucheck -v", "grep CPU /etc/sysconfig/vz-scripts/*.conf", "vzlist -a"

With all of that, we can understand how your cpu is distributed.
