Subject: *CLOSED* How do you create VEs on Debian/Ubuntu?
Posted by JimL on Sat, 24 Feb 2007 10:07:18 GMT

OK, so I've gotten OpenVZ working find on Ubuntu, however the only way I've been able to get a VE other than a Debian working is to use a precreated template, or clone a VE from a RH system.

Is there a way to get something like CentOS running on a VE from a Debian host? Something like a debootstrap for RPM distros would be a start.

Thanks,
Jim.
