hi all i have problem in my ve

[root@jd-vz home]# vzctl enter 1080
entered into VE 1080
id: cannot find name for group ID 0
id: cannot find name for user ID 0
vps3::/$

another problem

[root@jd-vz home]# vzctl enter 1081
entered into VE 1081
enter failed: unable to exec bash: No such file or directory
vps4::/$

and apache not runing

thanks

Hello.

Please, specify
1) which kernel do you use
2) which host OS do you use
3) which templates do you use for VE 1080 and 1081 (and where did you get these templates)
4) did these VEs work fine before? Or you have just created them and faced mentioned problems?
5) post your /proc/user_beancounters (from Hardware Node). You can check it yourself - if there any failcounters - they ought to be eliminated.
6) check if there are following files (ls -Flaio):
/vz/private/1080/etc/group
/vz/private/1081/bin/bash

Thank you.

- And what about beancounters?
- Could you please provide me an access to your node?

Thank you.
