I only have one VPS on the box. I used vzsplit 1 to make the config file so it should have all the resources of the box.   However I'm running into a ton of "memory" problems;

Here is a "top" of the node;

Cpu(s): 3.0% us, 3.3% sy, 0.0% ni, 92.8% id, 0.0% wa, 0.0% hi, 1.0% si
Mem: 1023728k total,   448488k used,   575240k free,   38032k buffers
Swap: 2048276k total,   0k used, 2048276k free,   134688k cached

Here is a "top" of the VZ;

Cpu(s): 11.1% us, 3.2% sy, 0.0% ni, 85.5% id, 0.3% wa, 0.0% hi, 0.0% si
Mem: 1023728k total,   227320k used,   796408k free,   0k buffers
Swap: 0k total,   0k used,   0k free,   0k cached

[client 68.98.x.x] PHP Fatal error: Allowed memory size of 8388608 bytes exhausted (tried to allocate 11264 bytes) in /var/www/html/wm.php on line 47

Here's a list of my bean_counters;

http://pastebin.ca/371725

Thanks,
