Subject: Re: anyone successfully using openvpn in a VE?

I have what appears to be the exact same problem as in the previous post in this thread. BTW, I'm sure that the poster here meant openVPN instead of openVPS. Has anybody had any luck solving it?

My outside client connection to VE1 via vpn works great. I can only ping VE1, however, from the client. If I then ssh into VE1 through the vpn tunnel, I am able to ssh to other machines within the private lan.

I've tried numerous routing rules as mentioned in the previous post, but had no luck routing the vpn address pool back to the openvpn server running on VE1. My default gateway for host node and all VEs is currently the upstream gateway from my ISP. I've also tried source-based routing in combination with the route rules recommended in the openvpn documentation.

Any thoughts or similar experiences?
Chris
