Subject: loop Devices?

I cant mount to my loop devices for some reason?
Application_Server _sxb # mount -t msdos -o loop=/dev/loop0 disk-image fs
/dev/loop0: Permission denied
Application_Server _sxb # mount -t msdos -o loop=/dev/loop2 disk-image fs
ioctl: LOOP_SET_FD: Operation not permitted

loop0 is mounted with mount -o bind and loop2 is mounted with --devnodes.

How can I access my loop (or Virtual) loop Devices that work?

Thanks

Cheers,
Robin

Hi,

What kernel do you use?
Can you please show the output "sysctl -a | grep kthread" from HN?

Thank You!

Hi,

I'm afraid that it is impossible to mount loop devices inside VE.
By the way, is it suitable for you to mount your images from HN to /vz/root/<VE_ID>/your_path?

Thank You!
