Hi,

> "When I am in bash, and I type ps aux, I get the SAME memory problems"

You have no increased failcounters of kmemsize, privvmpages, shmpages or related memory parameters in /proc/user\_beancounters,  
are you sure that's an OpenVZ "out of memory" error not php ?

Can you please, post

- the error message inside bash
  - relevant memory info's of used php.ini
-
