Subject: Change date on a VPS

Hi,

For my employer I would like to set up a NTP timeserver. However, this must be done in a VPS since we don't want to use a new server for that. While experimenting, we found that a VPS cannot set the time on its host node. Is it in any way possible to give the VPS the rights to adjust the time?

Kind regards,
Arjan Schrijver

Hi Arjan,

To set date in your vps, first adjust the time on Node and change the timezone in VPS.

Have a look at page 64 in the OpenVZ User-Guide. You have to set the capability for the VPS to alter the system time. Be aware that this

alters the system clock of the HW-Node and therefore for all VPS
running on that node.

Regards

Andreas
