You can install OpenVZ kernel from rpm using --nodeps option. It should
work properly! If it doesn't - it is a bug. The second way is to compile
kernel yourself.
If your controller is supported by SuSE kernel then with a great chance
it is supported by our kernel. If it isn't supported - file a bug to
OpenVZ and we probably include support of your device. If you want to
know more precisely is your controller supported or note, send us
output of `lspci` and `lspci -n` commands and we inform you.

HTH,
Vasily
