Trying to run the below on open vz always errors,

iptables -t nat -A POSTROUTING -p tcp -m tcp -o tun0 -j MASQUERADE
iptables: Unknown error 4294967295

However, if we dont use masquerade it works. We've lost a couple clients over this so would appreciate any pointers from users that can actually get this command to work on their boxes ...

VPS are normally using centOS 5

Hi,

1. What kernel do you use?
2. Did you try this inside VE?
3. Pay attention at IPTABLES parameter in /etc/vz/vz.conf and VE_ID.conf files.
