View Forum Message <> Reply to Message

I just tried to compile a vanilla 2.6.18 kernel patched with http://download.openvz.org/kernel/branches/rhel5-2.6.18/028stab057.2/patches/patch-92.1.1.el5.028stab057.2-combined.gz on a 64 bit CentOS-5 system. I enabled xen in the configuration, and when compiling, it dies with this error:

```
CC      fs/eventpoll.o
fs/eventpoll.c: In function ‘sys_epoll_create’:
fs/eventpoll.c:418: warning: ‘fd’ may be used uninitialized in this function
  CC      fs/compat.o
fs/compat.c: In function ‘sys32_quotactl’:
fs/compat.c:1568: error: storage size of ‘cdq’ isn’t known
fs/compat.c:1569: error: storage size of ‘cdq32’ isn’t known
fs/compat.c:1569: warning: unused variable ‘cdq32’
fs/compat.c:1568: warning: unused variable ‘cdq’
make[1]: *** [fs/compat.o] Error 1
make: *** [fs] Error 2
```

I've messed with some of the fs options trying to see if I could find one that caused the error, but haven't had much luck. Does anyone else have any ideas how to get around or fix this?

Hi Chris,

we've fixed the compilation and created a new development kernel with the fix.
Can you please check if it works or not? (sent via PM)

(if anybody else wants to test it - please, ask)

Thank you!

I am running the 14 XEN kernel and would like to test the 57.2 XEN kernel if you have one has an RPM.

I don't see it in the download area.

I tried it and it is working! Thanks a bunch for the fix.

Sorry I couldn't respond sooner, as I couldn't log into the site for a while. I eventually figured out that my privoxy proxy was being a bit too aggressive with filtering cookies. I'm not even sure how I logged in in the first place!

Thanks again for the fix Konstantin.

Hej,

I also need the patch. I've got the same problem on my machine...

Rgds, Tobi

Sorry for delay. Kernel has compiled successful with patches, but do not test it booting. I can check it later. Thx again.

Update: Booting and so on works ok too.

Hi,

I could also use this patch. I couldn't find it on the download page. Can someone point me to the right location?

Thanks!

Hi,

2.6.18-028stab057.2 is not the latest OVZ kernel available at the moment:
http://download.openvz.org/kernel/branches/rhel5-2.6.18/028s tab059.3/

So, please, try it and report back if your problem is solved with the new kernel or not.

Thank you.

Thanks, but now I have a new error

drivers/built-in.o: In function `e1000_init_module':
e1000_main.c:(.init.text+0x6b14): undefined reference to `e1000e_driver_request'
make: *** [.tmp_vmlinux1] Error 1

This is already known issue:
http://bugzilla.openvz.org/show_bug.cgi?id=1055

Just select e1000e as well.

I think i have the same problem but on kernel 2.6.18-028stab056.1 (not rhel, as i need it for debian).
It's latest stable, not rhel, kernel, so i think i need that patch.

Edit:
On openvz config, it compiles without error.

Here you are.

Please, note, these patches are for 2.6.18-028stab057.2 kernel!

diff-quota-compat-20080806
diff-xen-flush_tlb_page-2008080
diff-include-cacheflush-20080806

But AFAIK these patches are already in 2.6.18-028stab056.1 and thus you've faced another issue. Please, file a bug for your issue and attach your config file.

EDITED here: surely if those patches are not in 2.6.18-028stab057.2, they are also not included

into 2.6.18-028stab056.1, don't know why i decided that.

Thank you.

Thx.

Those patches aren't applied to 2.6.18-028stab056.1
I applied diff-quota-compat-20080806 and kernel compiled with default config (from vanilla kernel)

I think that either this patch shoud be applied, either if some kernel options are requered, and compiling kernel without them don't make sense, it shoud check it's sanity before compilation.
