Thanks Kir -

I found reference to that bug in several other posts, and took liberty to make adjustments.

I've been running with:

```
echo 20000 > /proc/sys/net/ipv4/tcp_max_tw_buckets_ub  
echo 256 > /proc/sys/net/ipv4/tcp_max_tw_kmem_fraction
```

...and still experienced the issue. Do you think the 384 value will improve this? And would my 20,000 value for `_ub` be sufficient, or is the 16536 significant?

One other question - would there be some way to monitor the onset of this issue? I.e, some value in `/proc` that would indicate this problem is about to occur?
